phonocamptica

User-Manual

1. About

name: phonocamptica
species: virtuos reverb
quantity: 55
works in : acustica audio nebula

Introduction:

Here it is, the first reverb-collection from analoginthebox.com called: phonocamptica.

It's name is derived from the works & studies of Athanasius Kircher, who was a scholar of the 17th-century and has written about music and acoustic.

One of his titles is called: "Musurgia Universalis" (1650). In this specific title he is experimenting how sound reflects. With "Magia Phonocamptica, sive de Echo", Kircher has developed regularities in how sound reflects. Because of his works and studies, this library is dedicated to Kircher and his studies.

With more than 50 different reverb-programs, we have build a universal library for nearly every task where a reverb is useful, be it for movies & soundtracks, intruments, vocals or sound design. All the reverbs are derived from two of the most famous reverb-machines out of denmark. What makes it very special is the fact, that we have tweaked every single program until we were satisfied by our own.
We hope you'll like it!

2.Installation PC

1. Repeat steps 2-5 (as seen below) for each installer of Phonocamptica.

2. Wait for the verification process to complete. Please be patient as this could take a few minutes!

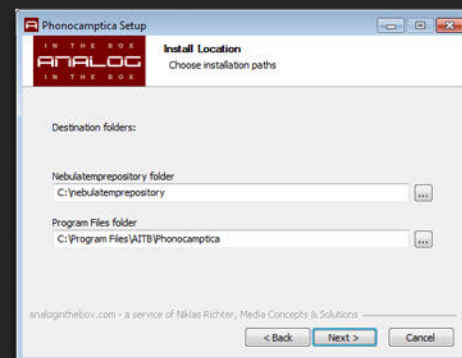

3. Read the End-User-License-Agreement carefully before you agree and continue the installation.

4. You need to choose two different install locations:

   The first one is the folder where your programs and vectors are stored usually. ("nebulatemporepository").

   The second is the directory where this manual and the uninstaller will be saved.

   The installer will automatically detect your "nebulatemprepository" directory as well as your Windows "Program Files" folder. If, for any reason this does not happen, please make sure that you select the right folders manually.

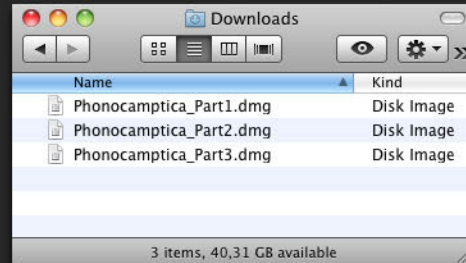

5. Finally click on the "Install" button and the installer will do the rest.
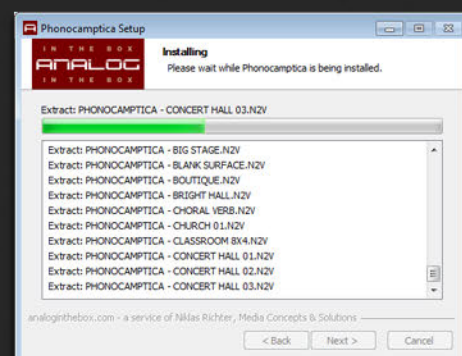

3. Installation Mac

1. You need to download and install the Phonocamptica Library.

   Repeat steps 2-4 (as seen below) for all disk images.

2. Open / Mount the disk image and run the installer package. It will copy all programs and vectors to your Nebula folder.
   Drag the manual to a folder of your own choice.

3. Read the Software License Agreement carefully before you agree and continue with the installation.

4. Follow the default steps through the installer. At a certain point you will be prompted for your admin password. Please be patient while the installer is copying all necessary files as this process could take a few minutes!

4. Authorization

Before you can start using Phonocamptica you will need to authorize the library. This is done in a few simple steps.

1. Start your DAW and open Nebula. Load any preset that is included in the Phonocamptica library.

2. Loading this program will fail and Nebula will load the internal "init" program instead. This is wanted behavior. During this process Nebula creates a challenge file named PHONOCAMPTICA.SER in your "Nebulatemprepository" folder.
   The location of this particular folder can vary for PC users depending on their individual installation.
   For mac users it is usually: /Library/Audio/Presets/ AcousticaAudio/Nebula3
3. Log in to the analoginthebox.com website, navigate to "My Account" and click the "authorize" button for Phonocamptica.

4. Upload the recently created challenge file (present in your "nebulatemprepository" folder), either by clicking on the "Upload" button and selecting the file manually, or by dragging it into the authorization window.
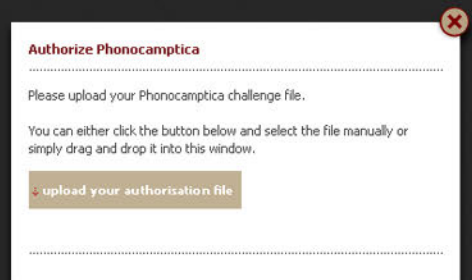

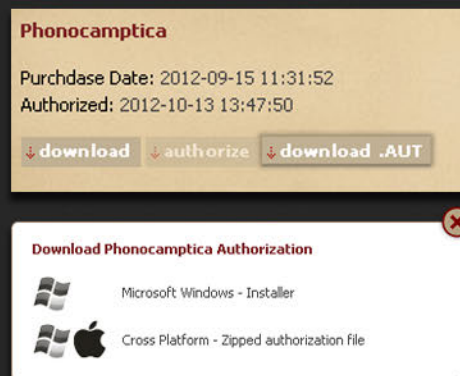

4. Authorization

5. Wait until your challenge file has been processed and close the window.

6. Click on the "Download .AUT" button. You can either choose to download your license as a plain authorization file for Mac and Windows or an installer for Windows systems.

7. (PC) Install the authorization by running the Phonocamptica License Installer and follow the shown instructions.

(MAC) Install the authorization on Mac by copying the PHONOCAMPTICA.AUT file into your "nebulatemprepository" folder.
Perfect! You're ready to use your new Nebula library!

Controls
phonocamptica controls

Program & Browser:
Load a program with the integrated browser by clicking into the name.

INPUT:
Input Gain (DAW)

OUTPUT:
Output Gain (DAW)

DRY:
Amount of the DRY signal
measured in dB.

FX:
Amount of the WET signal
measured in dB.

Liquidty:
Changes the length, depth,
diffusion and tone of the Reverb.
This effect needs a little time
to be effective.
REVERB TIME CONTROL

FREQD:
Change the FREQD-
Parameter to shorten
or lengthen the
reverb.

KERN:
Change to the KERN-Page
inside NEBULA.

PREVIEW THE REVERBS

PREV & FULL:

PREV: Hear a light version of a program. Loads fast,
static impulse without modulations.

FULL: Loads the complete program.
Modulations and dynamic behavior activated.

Quotes:

"The denser reverb programs are very impressive.
And the room sounds pretty good." - Vicnest

"So far this has been pretty good [...] I am loving the "lush vocal" and all of the smaller room presets best so far." - Rich Prewett
