Perfect! You're ready to use the W735EQ!

About

The W735EQ is based on the very rare and hard to find W735/1 equalizer which was designed and manufactured by the RFZ – Rundfunkzentrum Berlin / Deutsche Post. The W735EQ is a 7 Band-Graphic-EQ with the opportunity to boost or cut the following frequencies: 63Hz, 125Hz, 250Hz, 1kHz, 2.5kHz, 6kHz and 11kHz.

It's design was also used in the EB800 as a Mono-Module. Only a few of them ever were built and survived the post berlin-wall-time.

We're happy to own two of these rare and special equalizers and that we have ported them for you as a plug-in. Now you can use it on everything you want! As much as you want! Use it to shape your sound with this unique equalizer! No need for the 1000th emulation of all the other big-name-equalizers.

Thanks to the V.V.K.T-Engine from Acustica Audio, together with the best converters money can buy, you are in luck to have a very accurate recreation inside your DAW.
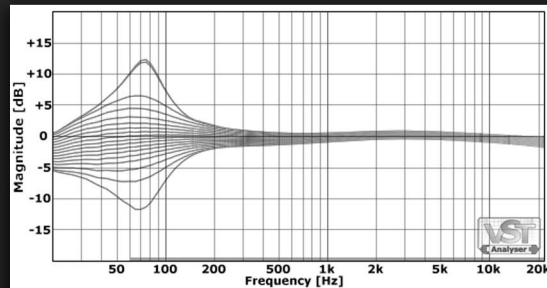

"We made it immortal and accesable to the afterworld!"

This is the original W735/1 Equalizer which was used for the development of the W735EQ Plug-in.

Characteristics

63Hz Peak Filter

Controls
The W735EQ-Controls

Dial in your desired **frequency** you want to boost or cut

Change the **input gain** for gainstaging purposes

Change the **output gain** for gainstaging purposes

Cut or boost a choosen frequency. Use - for cut and + for boost

Switch the plugin **on or off**

The W735EQ-Plugin-GUI

"Sound: Damn good!!! Absolutely suitable for Mastering.
No nasty phase-issues...." - Nico Duda

"I've tested the W735EQ, and it's very musical.
Love what it can do to enhance the highs and lows." - Vic Nest

"The W735EQ is just the right tool for a silky and smooth high end,
only a few equalizers (the Siemens W295B comes to mind) can do
that musical boost without sounding harsh"
- David Sánchez, Mercado Negro Estudo

W735EQ Plugin-Manual
